Biological active food supplement “ATERIS”

Scientists at the Institute of Microbiology of the Academy of Sciences of the Republic of Uzbekistan have developed the ATERIS dietary supplement, which is used to treat patients to prevent high blood cholesterol levels. The biological supplement “ATERIS” normalizes lipid metabolism and reduces the risk of excess atherogenic lipids (also called “negative cholesterol”), improves the morphofunctional state of blood vessels. This supplement provides useful properties of the product due to the normal control of the cardiovascular and nervous systems, the functional state of blood vessels, lipid metabolism, promotes blood circulation, improves physical and mental abilities.
